

## ECMPS 2022 Quarter 2 Release Notes

### I. Introduction

The 2022 Quarter 2 release of the ECMPS Client Tool includes bug fixes.

### II. Interface/ Database Changes

#### A. New and Modified Functionality

- None

#### B. Bug Fixes

- None

### III. Check Changes

#### A. New and Modified Checks

- None

#### B. Bug Fixes

- ADESTAT-5, 11; FF2LTST-4: Updated checks to require an 'INPROG' fuel flow-to-load test result in the quarter that baseline data collection was completed. This applies when the baseline data collection occurred in a quarter after the quarter in which all the required fuel flowmeter accuracy tests, transmitter/transducer accuracy tests, and primary element inspections are completed. Also updated logic to begin comparing reporting operating hours to reported fuel flow-to-load test result codes in the quarter following the completion of baseline data collection.
- DCSTAT-4: Updated check for dual range analyzers to mark data as out of control after the failure of one range until a passing test occurs at both ranges. Also changed the search for failed tests to include test in the current hour.

### IV. XSD Changes
